

I'm not robot!

Avoid lumps, unwanted textures, and an ugly surface from appearing in your drywall repair job. By following some simple steps, you can get your wall looking like no damage ever happened. [homeandgardeningguide.com](#) gathered information and step-by-step instructions on how to repair torn drywall paper. Repairing Torn Drywall Paper To repair torn drywall paper, you will need a few simple tools and supplies from your local hardware or home improvement store, such as: • 6 inch Joint Knife (scraper)• Sandpaper (150 grit)• Plastic Drop Cloth (one for the floor and more to cover furniture, electronics, etc.)• Large Sponge (soft texture is best)• Spray Bottle (filled with water)• Protective Latex Gloves• 2 Paint Rollers (one for the primer and one for the paint)• Paint Tray with 2 Liners (one for the primer and one for the paint)• Shellac or water-based Wall Primer• Spackle, Joint Compound, or Drywall Mud Use the following steps to help you make clean and efficient repairs: Drywall Paper Repair Step 1 - Cover with Drop Cloths Get one drop cloth on the floor with one edge taped to the baseboard under the damaged area, and extend the drop cloth several feet in either direction to catch as much debris as possible. Use multiple drop cloths to cover desks, furniture, computers, Televisions, plants, and books. Note: Even the slightest breeze from a fan or air conditioning vent may carry particles far from the area being repaired. Drywall Paper Repair Step 2 - Scrape the Damaged Area Use the joint knife (scraper) to scrape away any loose pieces of paint or drywall paper. This process may enlarge the area to be repaired but is necessary to achieve a well-executed, flat and seamless repair. Avoid using a blade or x-acto knife to cut away rough edges. Doing this may cause you to score the sheetrock, creating a weakness in its structural integrity. Drywall Paper Repair Step 3 and 7 - Apply Primer There are two steps in the process where primer should be applied during drywall repair. For this step, once you have scraped away all of the loose drywall paper and paint, apply a thin coat of primer to the damaged areas. Do so using a roller, roll on the primer using some force. You want the primer to get into the cracks, crevices, and loosened paper to re-strengthen the damaged areas. Wrap the roller in plastic to prevent it from drying out; it will be used again in step 7. Drywall Paper Repair Step 4 - Apply Spackle, Joint Compound, or Drywall Mud Once the primer has dried, use your joint knife to spread the spackle onto the area being repaired. The following will help you avoid extra work: • Apply generous amounts of spackle to the damaged area• Use your joint knife to run over it, taking away excess material• Leave approximately an eighth of an inch of material above wall level It is essential to put enough spackle on the repair. You can sand the excess away, but when you have to apply more after the fact, you lose time and risk ruining the job. When you have an area that the spackle doesn't want to adhere to, apply it by hand, using pressure until it stays where you applied it. Use the joint knife to scrape the excess away. When the spackle goes on rough, or leaves flaky edges after scraping the excess away, Spray the area with water and lightly smooth it over with a soft sponge. Once you have filled all of the damaged areas, allow the spackle, joint compound, or drywall mud to completely dry. Some compounds are colored when wet and fade to white when dry. Generally, eight to ten hours is enough time for your repairs to completely dry. Drywall Paper Repair Step 5 - Sanding Before beginning the sanding process, make sure that your drop cloths are covering your furniture, desks, electronics, and carpet. This is fine dust that travels easily with the slightest breeze. Use a 150 grit sandpaper to remove any excess compound. Sand both horizontally and vertically until you have flattened the repair level with the wall. Use a ruler or flat edge against the wall to confirm that the surface is level. Use a pencil to mark areas that still need to be sanded gently. Once you have finished sanding, take a moment to look over the finished areas and confirm that no spots were missed or left rough. Drywall Paper Repair Step 6 - Cleanup Using a soft-bristle brush, brush the repaired area from the top down to remove any residual dust from the wall. Then, using a clean, slightly moistened cloth, wipe the area from the top down. By cleaning the wall, you will ensure that the primer has a clean surface to adhere to and avoid any bubbling or peeling. Carefully remove the drop cloths from your furniture and electronics. Replace the drop cloth on the floor before applying primer and paint to finish the job. Drywall Paper Repair Step 7 - Apply Primer Now that you have finished sanding and cleaning the wall apply another coat of primer to the repaired areas using the same method as in step 3. The primer will stop the repaired areas from soaking up paint and leaving faded or darkened marks on your finished wall. For professional tips on painting your wall, read [homeandgardeningguide.com/improvement/painting/diy-interior-painting-trim-baseboard-crown-molding/](#) Watch this video about primer application: Torn Drywall Paper Drywall "facer" and "backer" paper is the covering that protects and reinforces panels of sheetrock material (calcium sulfate dihydrate or gypsum). Sometimes, the facer paper can be torn away, exposing the actual "sheetrock", and leaving an unsightly gash in an otherwise perfect wall. The following may cause drywall paper to tear and should be avoided if possible: Glue - Using glue to anchor a vanity mirror or other large object to a wall is common practice. However, when the glued object must be removed, it will likely tear the paint, primer, and drywall paper wherever the glue was applied. Tape - At times, we put tape on a wall to re-do the trim on a paint job, mark a spot to hang an object, or secure something to the wall. Like glue, strong adhesive tape can tear drywall paper away when removed. It is recommended to use painter's tape or tape with a lower adhesive quality if it is applied directly to your wall. Nails and Anchors - We use nails and anchoring systems to hang paintings, pictures, and other objects on the wall. Removing those nails or anchoring systems can not only tear the drywall paper, but they can also break the drywall, causing a bulge or even a large hole. Drywall Paper Repair Tips In this article, you discovered step-by-step instructions and professional tips on how to restore damaged drywall and its paper. Fixing your damaged drywall will not only restore the aesthetic to your room, but also increase the value and appeal of your home. With a little effort and guidance, you can easily restore the wall and make its damaged paper or drywall look like nothing ever happened. Anyone who has lived in a house or apartment with drywall has experienced mishaps with drywall. Torn drywall paper is a pain to fix if you don't know the proper steps to follow to make it look great. In this post, I am going to how to fix torn drywall paper. Firstly, I am a DIYer and have been fixing drywall my whole life as I grew up in a house that was in perpetual repair. So, I consider my drywalling and repairing skills to be above average. This post contains affiliate links. If you make a purchase, I make a small profit at no additional cost to you. It keeps the lights on! Torn drywall paper? Don't worry; you can fix that. To repair a tear in your drywall paper, you will need specific tools and products to make your finished product invisible. PIN FOR LATER What you need to fix a drywall paper tear: To purchase any of these products, click on the pictures. Shellac based primer: There are many primers on the market. For repairing drywall paper, you will need something that is not water based. Below you will find two brands that are readily available and work well at sealing the paper for repair. Joint compound: For someone who has never worked with joint compound, I recommend a slow setting compound, as to give you sufficient time to work. I also like the premixed joint compound for my personal use. A sizeable, flexible blade/putty knife: The idea behind the larger size is that you will be able to cover the tear itself and "feather" out the edges to create a seamless transition, so your repair is virtually invisible. Purchase a blade the is at least 2-4 inches larger than your tear. The exception to this rule is if you are repairing a large tear or whole wall, then use a blade that is as large as you can handle. Drywall sanding sponge: When sanding joint compound, you need fine grit sandpaper or a sanding sponge. I have used both and feel that the sanding sponges are more natural to control and leave a superior finish to just using sandpaper. New Drywall primer: Any time you put up new drywall you need to prime it so that it is ready for paint. This is especially true when you are working with joint compound. If left to its own devices, joint compound will absorb paint at an uneven rate and leave your walls looking modeled and stained. BUY THIS AT YOUR LOCAL HARDWARE STORE! Wall paint color: Lastly, you need to paint over your repair with whatever paint you desire. I love my paint color. It's called sandstone cove by Behr paint. It is a beautiful natural color that has no yellow or pink undertones. BUY THIS AT YOUR LOCAL HOME DEPOT! Tack cloth: For cleaning up the walls and paint spills I use a damp washcloth. Tutorial: I hope you find this video tutorial helpful. I am just a DIYer and not a professional. So if you have a significant repair and have never attempted drywalling before you may want to get a professionals help. If you need any advice on how to properly paint a brick fireplace, I've gotcha covered.
